

Empathy Map Canvas

Project: Implement Client Script & UI Policy (Incident)

Document Reference: PRJ-INC-P1-003

Milestone: M1 - Ideation

Owner: Rahul (Team Lead)

Status: Submission Ready

Persona 1 - Service Desk Agent

Dimension	Notes
Says	"I need to log this quickly, the caller is waiting."
Thinks	"I hope I picked the right Category."
Does	Fills the form fast, changes Category mid-way, edits State in lists to save time
Feels	Time pressure; frustrated when a form rejects a save without explanation
Pains	Unclear errors, stale Subcategory
Gains	Clear, immediate messages that explain what to fix

Persona 2 - Fulfiller / Resolver

Dimension	Notes
Says	"Who owns this?"
Thinks	"Is this really Critical?"
Does	Works from queues sorted by priority
Feels	Annoyed by unowned or mis-prioritised incidents
Pains	Missing owner / group on important incidents
Gains	High-impact incidents arrive assigned and consistently prioritised

Persona 3 - Service Manager / Process Owner

Dimension	Notes
Says	"Why are these reports inconsistent?"
Thinks	"State changes need to follow the process."
Does	Reviews dashboards, audits Incident handling
Feels	Concern about uncontrolled updates
Pains	Bad data in reports, accidental closures from lists
Gains	Trustworthy data and controlled State transitions

Design Implications

1. Messages must be short and say exactly what to fix.
2. Controls must feel automatic (clear / auto-set) rather than add steps.
3. List-edit protection must explain *where* State can be changed.
