

Data Flow Diagrams & User Stories

Project: Implement Client Script & UI Policy (Incident)

Document Reference: PRJ-INC-P2-002

Milestone: M2 - Requirements

Owner: Rahul (Team Lead)

Status: Submission Ready

1. Level 0 - Context Diagram

```
[User] --(Incident data)--> ( Incident Form / List Controls ) --(validated data)--> [incident table]
                                     ^
                                     |-- UI Policy rules, Client Script rules
```

2. Level 1 - Process Flow

```
1. Open form -----> 2. onLoad checks
3. Field changed -----> 4. onChange scripts (Category / Impact / Priority)
5. Impact evaluated ---> 6. UI Policy: mandatory + read-only (reverse when not High)
7. Submit -----> 8. onSubmit validation --valid--> 9. Save
                                     \--invalid--> 10. Error, user corrects
11. List State edit ---> 12. onCellEdit rejects
```

3. User Stories

ID	As a...	I want...	So that...
US-01	Service desk agent	to be told when Short description is missing	the Incident is searchable
US-02	Service desk agent	Subcategory to reset when I change Category	I never keep an invalid pair
US-03	Service desk agent	a warning when I choose Priority 1 - Critical	I understand the consequence
US-04	Service manager	Urgency set to High when Impact is High	priority is consistent
US-05	Fulfiller	High-impact incidents to require an owner and group	nothing critical is unowned
US-06	Service manager	Urgency locked while Impact is High	it cannot be lowered by mistake
US-07	Process owner	State not editable from lists	State changes follow the form
US-08	Agent	State still editable on the form	I can progress the Incident normally
US-09	Tester	rules to switch off when Impact is not High	I can verify reverse-condition behaviour

4. Acceptance Criteria (Gherkin)

Scenario: Block a blank Short description (US-01)

Given I am on a new Incident form

When I leave Short description empty and click Submit

Then the Incident is not saved

And I see the message "Short description is required."

Scenario: Clear Subcategory on Category change (US-02)

Given Category is "Network" and Subcategory is "VPN"

When I change Category to "Hardware"

Then Subcategory is empty

Scenario: High impact controls (US-04, US-05, US-06)

Given I am on an Incident form

When I set Impact to "1 - High"

Then Urgency becomes "1 - High" and is read-only

And Assigned to and Assignment group are mandatory

Scenario: Reverse condition (US-09)

Given Impact is "1 - High"

When I change Impact to "3 - Low"

Then Urgency is editable again

And Assigned to and Assignment group are no longer mandatory

Scenario: Block State edit from list (US-07)

Given I am on the Incident list

When I edit the State cell inline

Then the edit is rejected with an explanatory message
