

Solution Requirements

Project: Implement Client Script & UI Policy (Incident)

Document Reference: PRJ-INC-P2-003

Milestone: M2 - Requirements

Owner: Rahul (Team Lead)

Status: Submission Ready

1. Functional Requirements

ID	Requirement	Mechanism	Story
FR-01	Short description must be non-blank and at least 10 characters on submit	onSubmit	US-01
FR-02	Subcategory is cleared when Category changes	onChange (category)	US-02
FR-03	Selecting Priority 1 - Critical shows a warning; other values remove it	onChange (priority)	US-03
FR-04	Impact = High sets Urgency = High	onChange (impact)	US-04
FR-05	Impact = High makes Assigned to mandatory	UI Policy Action	US-05
FR-06	Impact = High makes Assignment group mandatory	UI Policy Action	US-05
FR-07	Impact = High makes Urgency read-only	UI Policy Action	US-06
FR-08	State cannot be edited inline in lists	onCellEdit (state)	US-07
FR-09	State remains editable on the form	(no list restriction on form)	US-08
FR-10	All High Impact rules reverse when Impact is not High	UI Policy <i>Reverse if false</i>	US-09
FR-11	Opening an Incident re-applies Urgency / Priority guidance	onLoad	-

2. Non-Functional Requirements

ID	Requirement
NFR-01	Controls respond instantly in the browser with no server round trip
NFR-02	Messages are short, specific and actionable
NFR-03	Scripts avoid the isLoading trap - saved values are never overwritten on load
NFR-04	All artifacts are version-controlled in this repository
NFR-05	Configuration is repeatable via scripts/setup_ui_policy.js

3. Constraints and Assumptions

- Client-side controls apply to the UI only; imports, APIs and integrations are not blocked (future Business Rule).

- Choice values assumed: Impact/Urgency 1 = High, Priority 1 = Critical.
- Target is a ServiceNow developer / non-production instance first.

4. Traceability

Every FR maps to a story above and to at least one test in docs/TEST_CASES.md.
