

Technology Stack

Project: Implement Client Script & UI Policy (Incident)

Document Reference: PRJ-INC-P2-004

Milestone: M2 - Requirements

Owner: Rahul (Team Lead)

Status: Submission Ready

Layer	Technology	Use in this project
Platform	ServiceNow (Personal Developer Instance)	Hosts the Incident application
Data model	incident table	Target of all controls
Declarative UI logic	UI Policy, UI Policy Actions	High Impact Control
Scripted UI logic	Client Scripts (JavaScript)	onLoad, onChange, onSubmit, onCellEdit
Client API	g_form	getValue, setValue, clearValue, showFieldMsg, hideFieldMsg, addInfoMessage, addErrorMessage
Automation helper	GlideRecord background script	scripts/setup_ui_policy.js
Testing	Python 3, Node.js	Repository checks and script simulation
Documentation	Markdown, Pandoc, LibreOffice	DOCX and PDF generation
Version control	Git / GitHub	Submission

Event-Type Reference

Event	Fires when	Can block the action?
onLoad	Form finishes loading	No
onChange	A field value changes	No
onSubmit	User submits / saves the form	Yes (return false)
onCellEdit	A list cell is edited inline	Yes (callback(false))
