

# Solution Architecture

**Project:** Implement Client Script & UI Policy (Incident)  
**Document Reference:** PRJ-INC-P3-003  
**Milestone:** M3 - Design  
**Owner:** Rahul (Team Lead)  
**Status:** Submission Ready

## 1. High-Level Architecture

High-level system architecture: Incident Client Script & UI Policy project

## 2. Layers

| Layer             | Components                                                                                                                         |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------|
| Presentation      | Incident form, Incident list                                                                                                       |
| Declarative logic | High Impact Control UI Policy + 3 actions                                                                                          |
| Scripted logic    | 6 client scripts                                                                                                                   |
| Data              | incident table (fields: short_description, category, subcategory, impact, urgency, priority, state, assigned_to, assignment_group) |

## 3. Requirement-to-Implementation Mapping

| Requirement                | Component                    |
|----------------------------|------------------------------|
| FR-01                      | Script 5 (onSubmit)          |
| FR-02                      | Script 2 (onChange category) |
| FR-03                      | Script 3 (onChange priority) |
| FR-04                      | Script 4 (onChange impact)   |
| FR-05, FR-06, FR-07, FR-10 | UI Policy + Actions          |
| FR-08, FR-09               | Script 6 (onCellEdit)        |
| FR-11                      | Script 1 (onLoad)            |

## 4. Access Model

Controls apply to all users who open the Incident form or list. No role changes are made. Administrators can deactivate any policy or script individually.

## 5. Sequence
