

UAT Test Plan & Execution Report

Project: Implement Client Script & UI Policy (Incident)

Document Reference: UAT-REP-P5-001

Milestone: M5 - Testing

Owner: Dakshanraj

Status: Submission Ready

1. Objective

Confirm that every Incident control behaves as specified, including negative cases and reverse-condition behaviour, on a ServiceNow instance.

2. Environment and Entry Criteria

- ServiceNow developer / non-production instance with the Incident application.
- **High Impact Control** UI Policy and all 6 client scripts **active**.
- Tester has the **itil** role and at least one Assignment group and user available.

Priority note: Priority is normally calculated from Impact and Urgency. To trigger **Priority 1 - Critical**, set Impact = 1 and Urgency = 1 (or use a form layout where Priority is editable).

3. Test Scenarios

ID	Scenario	Steps	Expected result	Req	Actual	Status
UAT-01	Blank Short description (negative)	New Incident; leave Short description empty; Submit	Save blocked; error shown	FR-01		Pending
UAT-02	Whitespace Short description (negative)	Enter only spaces; Submit	Save blocked	FR-01		Pending
UAT-03	Valid Short description (positive)	Enter "VPN not connecting from home"; Submit	Incident saved	FR-01		Pending
UAT-04	Category clears Subcategory	Pick Category and Subcategory; change Category	Subcategory empty	FR-02		Pending
UAT-05	Critical warning shown	Set Impact 1 and Urgency 1 (Priority becomes 1 - Critical)	Warning appears	FR-03		Pending
UAT-06	Critical warning removed	Change Impact to 3	Priority changes; warning removed	FR-03		Pending
UAT-07	Impact High sets Urgency	Set Impact = 1 - High	Urgency = 1 - High	FR-04		Pending
UAT-08	Urgency read-only	With Impact = High, try to edit Urgency	Field is read-only	FR-07		Pending
UAT-09	Mandatory owner and group	With Impact = High, leave Assigned to / Assignment group empty; Submit	Both flagged mandatory; save blocked	FR-05, FR-06		Pending
UAT-10	Reverse condition	Change Impact from High to Low	Urgency editable; Assigned to /	FR-10		Pending

ID	Scenario	Steps	Expected result	Req	Actual	Status
			group no longer mandatory			
UAT-11	State list edit blocked	Open Incident list; double-click State cell; change value	Edit rejected with message	FR-08		Pending
UAT-12	State change via form allowed	Open Incident form; change State; Save	Change saved	FR-09		Pending

4. Offline Logic Simulation (automated)

`automated_tests/client_script_simulation.js` confirms script logic for UAT-01 to UAT-07 and UAT-11 against a mocked `g_form`. It does **not** replace the live tests above (UI Policy behaviour, list editing and Priority lookup only exist on a real instance).

5. Execution Log (fill in during UAT)

Field	Value
Tester	Dakshanraj
Instance	
Execution date	
Browser	
Passed / Total	__ / 12

For each test change **Status** to *Passed* or *Failed*, record the **Actual** result and save a screenshot in `live_execution_proofs/` named UAT-XX.png.

6. Exit Criteria

All 12 scenarios Passed; no open critical defects; evidence attached.
